

Make music any way you can move. An accessible browser-based music and visual instrument used for cause-and-effect play, music-making, and sensory-friendly creative activities. Students play by touch, mouse, switch, head movement, eye movement, or any motion an ordinary webcam can see.

Privacy at a glance

- **No student accounts, rosters, or logins.** Nothing to provision or deprovision.
- Ordinary play creates no student profile, play history, or behavioral analytics.
- No advertising, no analytics, no trackers, no chat, no user-generated content.
- Camera and microphone are **optional**, processed **on the device**, and not uploaded by the app. No photo or camera image is ever stored.
- If a student presses Rec, the canvas and app sound — plus microphone audio only when Mic is on — save to that device; camera video is never included.
- Like any website, loading the page gives the hosting provider ordinary connection data (IP, request metadata) — described in the privacy policy; no profiles are built from it.

Student data, COPPA, and FERPA

- Core play requires **no student account and creates no student education record with us.**
- We describe how the product works rather than announcing legal conclusions; classification questions belong to your counsel and ours.
- We will complete your district's privacy questionnaire or review your student data privacy agreement: omer@halalhelper.com.

For IT

- One domain to allow: **lightsoundcolors.com**. Built to make no third-party requests during play; each release is tested for unexpected outside hosts.
- Runs in the browser. **No installation required**, no extension, no admin rights, no app-store access.
- Works on Chromebooks, iPads, Android tablets, Windows, and Mac in a current browser.

Accessibility

- Plays by **touch, mouse, switch, head, eyes, or any visible motion**; hands-free pointer with adjustable dwell (0.5–1.5 s).
- **Accessible Play**: a calm instrument **designed without flashing effects** — large pads, switch scanning, three play modes (Cause & Effect, Targets, Make Music).
- Respects the system reduce-motion setting; the full Studio includes a Calm mode designed to reduce rapid brightness changes.
- A formal VPAT has not been produced yet; email us if procurement requires one and we will prioritize it.

Safety

- The full Creative Studio contains flashing and fast-moving visuals. A **blocking seizure notice** must be acknowledged before play — shown every single time the Studio opens, so a previous student's acknowledgment never carries over on a shared device — and a safety link stays on screen during play.
- Hearing-safe defaults: volume starts at 30%, with a warning above 60%.
- Not a medical device; it does not diagnose, treat, or improve any condition.

Purchasing

- **The free version is free for classroom, recreation-program, and nonprofit use** on devices you control — written into the terms, not a promotion.
- Optional Pro unlock: **\$20, one time**, adds more visuals, instrument voices, journeys, and themes. One unlock code covers up to **5 devices**.
- Purchases are completed through Gumroad (merchant of record). Districts needing an **invoice, purchase order, or W-9**: email us.

Pilot classrooms wanted. Pilots get direct support from the developer and help shape the roadmap; we ask only for honest feedback. Email omer@halalhelper.com with "Pilot" in the subject.
